No more hand entry of inventory transfers, no more errors and greatly reduced labor costs.

The C&A IC Warehouse Physical Inventory Solution (*wireless*) is designed to reduce labor cost, down time and increase accuracy during the process of physical inventories of the inventory parts in your warehouse. Whether you take a full inventory once a year or periodic inventories each month the C&A IC Warehouse Physical Inventory Solution will be a great time and money saver.

Typical Procedure

- Take a "Snap-Shot" of your BusinessWorks inventory on hand quantity with the C&A IC Warehouse Physical Inventory software.
- Scan the parts that you wish to cross check the physical inventory with BusinessWorks.
- You will scan a barcode and then enter the quantity of that part.
- Repeat the scan process for as many parts as you wish. You can scan the same part a number of times if you have them in different locations.
- During the scan process a file is built on the server holding all the scanned information.
- Run the C&A IC Warehouse Physical Inventory software.
 - It will read the bar codes and quantities that you counted.
 - Then it will compare the BusinessWorks count against the scanned count and show you the variance.
 - If need be, you can make changes to the scanned count on the screen.
 - When satisfied the variances are correct, choose a date and make a small reference memo to identify the inventory.
- The IC & GL modules are now updated.
